FEATURES

- Compatible with TIA/EIA-485-A standard
- 2.5V~5.5V V_{CC1}, 4.5V~5.5V V_{CC2} power supply range, half-duplex
- Bus port ESD protection capacity of over 15kV HBM
- 1/8 unit load, allow up to 256 transceivers on the bus
- Driver Short-circuit protection, receiver open-circuit failure protection
- Low power shutdown function
- Data transmission up to 500kbps in an electric noise environment
- Wide temperature range: -40℃~125℃
- Strong anti-noise ability
- High CMTI: ±100kV/μs (typical value)
- Up to 5000 VRMS isolation voltage resistance
- Isolation gate life: >40 years.
- Wide-body SOIC16 package, RoHS compliant

DESCRIPTION

The SIT3485ISO is a capacitive isolated half duplex RS-485 transceiver, and bus port ESD protection capacity of more than 15kV HBM. It is a RS-485 transceiver fully meet the requirements of TIA/EIA-485 standard.

The SIT3485ISO includes a driver and a receiver, both of which can be enabled and closed independently. When both are disabled, both the driver and the receiver output are high resistance state. SIT3485ISO has 1/8 load, which allows 256 SIT3485ISO transceivers to be connected to the same communication bus. It can realize error-free data transmission up to 500kbps.

The SIT3485ISO has the functions of fail-safe, over temperature protection, current-limiting protection, over-voltage protection, etc.

PIN DESCRIPTION

PIN	SYMBOL	DESCRIPTION
1	V_{CC1}	Power supply, V_{CC1}
2	GND1	Ground point of power supply V_{CC1}
3	R	Receiver Output. When /RE is low and if A - B≥200mV, R will be high; if A - B≤-200mV, R will be low.
4	/RE	Receiver Output Enable. Drive /RE low to enable RO; RO is high impedance when /RE is high. Drive /RE high and DE low to enter low-power shutdown mode.
5	DE	Driver Output Enable. Drive DE high to enable driver outputs. These outputs are high impedance when DE is low. Drive /RE high and DE low to enter low-power shutdown mode.
6	D	Driver Input。With DE high, a low on D forces non-inverting output low and inverting output high. Similarly, a high on D forces non-inverting output high and inverting output low.
7	GND1	Ground point of power supply V_{CC1}.

PIN	SYMBOL	DESCRIPTION
8	GND1	Ground point of power supply V_{CC1}.
9	GND2	Ground point of power supply V_{CC2}.
10	GND2	Ground point of power supply V_{CC2}.
11	NC	No internal connection.
12	A	Non-inverting receiver input and non-inverting driver output.
13	B	Inverting receiver input and inverting driver output.
14	NC	No internal connection.
15	GND2	Ground point of power supply V_{CC2}.
16	V_{CC2}	Power supply, V_{CC2}.

LIMITING VALUES

PARAMETER	SYMBOL	VALUE	UNIT
Supply voltage	V_{CC1}, V_{CC2}	-0.5~+6	V
control port voltage	/RE, DE, D	-0.5~V_{CC1}+0.5	V
Receiver output current	I_O	-10~+10	mA
Bus side input voltage	A, B	-15~+15	V
Virtual junction temperature	T_j	150	℃
Storage temperature	T_{stg}	-65~150	℃

The maximum limit parameters mean that exceeding these values may cause irreversible damage to the device. Under these conditions, it is not conducive to the normal operation of the device. The continuous operation of the device at the maximum allowable rating may affect the reliability of the device. The reference point for all voltages is ground.

ADDITIONAL DESCRIPTION

1 Sketch

The SIT3485ISO is a capacitive isolated half duplex RS-485 transceiver, and bus port ESD protection capacity of more than 15kV HBM, including a driver and receiver. It has the functions of fail-safe, over-voltage protection, and over-current protection. SIT3485ISO realizes error-free data transmission up to 500kbps.

2 Allowing up to 256 transceivers on the Bus

The input impedance of the standard RS485 receiver is 12kΩ (1 unit load), and the standard driver can drive up to 32 unit loads. The receiver of SIT3485ISO transceiver has 1/8 unit load input impedance (96kΩ), which allows up to 256 transceivers to be connected on the same communication bus in parallel. These devices can be combined arbitrarily or with other RS485 transceivers. Any combination of these devices and/or other RS-485 transceivers with a total of 32 unit loads or less can be connected to the line.

3 Driver output protection

Over-current, overvoltage, and overtemperature protection mechanisms are used to prevent excessive output current and power dissipation caused by faults or bus contention, providing fast short circuit protection over the entire common mode voltage range(refer to typical operating characteristics).
